

*Haiger, April 2020.*

## **Solution Partner - SIEMAG TECBERG GmbH partners with SIEMENS AG for Automation and Drive Technology**

SIEMAG TECBERG is pleased to announce the expansion of a customer / supplier relationship and partnership that has existed for many years between Siemens and SIEMAG TECBERG.

Within the scope of this supplier relationship, Siemens produces and supplies automation and drive technology products based on the design and engineering of SIEMAG TECBERG.

Since March 26, 2020 SIEMAG TECBERG is official Solution Partner of Siemens especially for Large Drives LV - a partnership that is to be expanded in the interest of both parties.

With this partnership, Siemens recognizes the recent SIEMAG TECBERG investments in their TECBERG park, the headquarter in Haiger, where comprehensive extensions to the product assembly halls have been built as part of the Applied Engineering process to realize new dimensions in factory commissioning.

The possibilities already available at TECBERG park have convinced Siemens, that SIEMAG TECBERG company with its existing know-how and expertise is the right partner in the field of „Medium-voltage drives“.

### **System integration in TECBERG park offers advantages for both partners**

Two new product assembly halls, each with a large heavy-duty test field, corresponding power supply and crane system equipment for loads up to 200 t unit weight, as well as a new automatic warehouse allow SIEMAG TECBERG to further optimise its product assembly.

In this context, TECBERG park does not only stand for the mentioned structural extensions, but above all for the realization of a highly advanced system integration of mechanics, hydraulics as well as automation and drive technology of complete hoisting machines.

With these optimised test possibilities for its shaft hoisting systems, SIEMAG TECBERG is now taking on a pioneering role worldwide. No other manufacturer of systems of this magnitude currently undertakes such extensive product assembly and testing with system tests, carried out on test benches for the system integration of complete hoisting machines.

### *The company*

The SIEMAG TECBERG group is the world's leading supplier of shaft hoisting technology.

The group provides knowledge-based services for the supply of individual machines and systems for a total of six industrial applications: Shaft hoisting technology for raw material hoisting as well as storage of contaminated raw materials, hoisting and transport of heavy materials loads, ventilation and cooling of underground mines, technologies for the horizontal conveying of bulk materials including handling technology for raw materials, as well as technologies for the efficient use of energy in hoisting technology, ventilation and cooling.

The SIEMAG TECBERG group focuses its technical activities on the development, design, manufacture, commissioning and technical service of shaft hoisting systems for vertical and inclined hoisting of raw materials. The SIEMAG TECBERG group has distinctive engineering competences for mechanics, hydraulics, drive and automation technology. Worldwide unique reference projects prove the overall plant competence and leading position of the SIEMAG TECBERG group.

The technology of the niche specialist emerged from a blacksmith's shop founded in 1871 in Siegerland, which produced equipment for local ore mining and the iron and steel industry. Following a management buy-out in 2007, SIEMAG TECBERG was founded by Jürgen Peschke, who is still CEO and managing partner today.

The SIEMAG TECBERG group is represented on all continents by at least one subsidiary and cooperates with partners worldwide. In addition to the headquarters with assembly plant in Haiger, north of Frankfurt am Main, there are locations in Rugby/UK, Katowice/Poland and Moscow/Russia, supplemented by further locations with their own assembly plants in Tianjin/China, Sydney and Mayfield East/Australia, Johannesburg/South Africa and Milwaukee and Denver/USA. The group employs around 400 people worldwide. The business volume amounts to approx. EUR 120 million per annum. (as of 12/2019).
